

People's Energy Cooperative

Your Touchstone Energy Cooperative

Cycled Air Conditioning Program

I hereby apply for the Cycled Air Conditioning Load Management Program and will comply with the following criteria:

- The air conditioner must be a central air system and not a window unit.
- Usage pattern shall be such that the load can be cycled, 15 minutes on - 15 minutes off, during peak times.
- Cooperative personnel will be given access to the load management equipment for maintenance and inspection purpose.
- All air conditioning units must have a shut-off switch located at the air conditioning unit.
- A \$5 monthly credit shall be credited to your June, July, and August billing statements annually.
- Necessary load management equipment will be installed and maintained by a representative of the Cooperative.

I agree to comply with the rules and regulations of People's Energy Cooperative and I understand any willful violation of the usage constraints will automatically cancel my application and the Cycled Air Conditioning credit will no longer be available to me. In the event that tampering is found, any credit given since the last inspection will be billed back to me.

People's Energy Cooperative reserves the right to modify, terminate or otherwise amend the Cycled Air Conditioning program.
