It's free and easy

Spring is here and it's time to think ahead about air conditioning. Extreme heat can cause the demand for electricity to peak and the price you pay for energy to increase. By enrolling in People's Energy Cooperative's Cycled Air Conditioning Program, you can help us manage those peaks and save money on your energy bill.

Getting started is easy; you don't even need to be home during installation. A licensed electrician will install a small radio-controlled receiver on the outside of your home near your central air conditioner. Both the receiver and installation are free. The air conditioner must be a central air system - not a window or wall unit or a ductless system.

During peak demand times, or for economic reasons, the receiver may be automatically activated to cycle your air conditioner off and on in 15 minute intervals. However, the fan stays on, circulating already-cooled air throughout your home. Most members don't even notice when activation has occurred.

We Pay You

Enroll and receive a **\$5 credit** on your electric bill for the months of June, July and August.

Call or e-mail us at memberservices@peoplesrec.com to request an enrollment form or download one from the 'Programs' section of the 'Forms' page on www.peoplesenergy.coop.
